Dear Sir,

as I write this letter, a most foul smell permeates our estate, our homes and at this moment, I have given up trying to eat breakfast as the smell fills our home, upstairs, downstairs and into the dining room where my wife and I were eating.

It is absolutely revolting and very antisocial as well as probably a severe health hazard.

You will probably read in national press recently of the number of 'Legionair Disease' occurrences rising in the U.K, with at least one recent death, and all associated with composting waste, and this bad foul smell being carried into our estate and lives could be harbouring these viruses.

Over the last few weeks whenever the smell occurred I set off in my car to try to pin point the source, and I have located it at a 'DIGGLE GREEN FARM

WILTON LANE

CULCHETH

which I have found out carries out waste, composting.

Talking to my neighbours I have found out that many of them have also complained

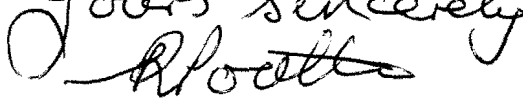

to your office.

The foul smell started some time last year as I remember, but was only very mild, but over the last few months it is getting very much stronger. This is blighting our lives, especially now this is continuing into the late evening, and on Thursday 3rd October 2013 it was still very strong at 10.00pm. when I retired to bed and could smell the foul odour in the bedroom, and all other upstairs rooms.

Although this foul smell does not occur every single day, it does most days and at irregular times, and it certainly does influence and spoil our lives, greatly.

Official and constructive investigation and action is needed by your office, and I would be grateful for your reply to this request.

I thank you for affording the time to read this letter.

Yours sincerely

RAY POULTON
